What is jQuery?

jQuery is a fast, small, and feature-rich JavaScript library. It makes things like HTML document traversal and manipulation, event handling, animation, and Ajax much simpler with an easy-to-use API that works across a multitude of browsers. With a combination of versatility and extensibility, jQuery has changed the way that millions of people write JavaScript.

- ▶ 88% of Android API classes on Stack Overflow
- Highly correlated with usage (not necessarily confusion).
- Twice as many examples can be found in the accepted answer versus official android guide.

add blobs or trees to a created repository using pygit2 (libgit2)?

I am trying to use pygit2 library.

seems I got stuck on the first step. its documentation doesn't explain how to create a blob and add it to a tree. It is mostly around how to work with an existing git repository but I want to create one and add

The python bindings don't let you create a blob from a file directly, so you'll have to read in the file to memory and use Repository.write(pygit2.GIT_0BJ_BL0B, filecontents) to create the blob.

You can then create trees with the TreeBuilder, for example, like

```
import pygit2 as g

repo = g.Repository('.')
# grab the file from wherever and store in 'contents'
```

- Thanks a lot, how can I learn more about pygit2? none of what you mentioned is in pygit2 document, How did you learn how to use it? Peqi Hash May 5 '12 at 11:29

Developers May Be Getting 50% of Their Documentation From Stack Overflow

Posted by Soulskill on Tuesday March 05, 2013 @03:17PM from the not-half-bad dept.

Mary Na "Develo docume Expand

"Software companies, such as Microsoft, create documentation for millions of topics concerning its APIs, services, and software platforms. Creating this documentation comes at a considerable cost and effort. And after all this effort, much documentation is rarely consulted (citation) and lacking enough examples (citation). A new study suggests that developers are increasingly consulting Stack Overflow and crowd-sourced sites over official documentation, using it as much as 50% of time. How should official documentation be better redesigned? What are the implications of software created from unruly mashups?"

This question already has an answer here:

What can Stack Overflow do to persuade female programma 16 answers

I've been here for a little while, but I've never seen a single for some, but I've honestly never seen any.

What can Stack Overflow do to persuade female programmers to participate more? [closed]

I know a lot of female programmers, and I know there are a good number of them out there.

But I don't recall ever having one of my questions answered by, nor have I ever answered a

question by a female programmer here at Stack Overflow

Now I mostly deal in the Delphi tag, and that may make a difference. But I've got the feeling there is something about the programming social network that Stack Overflow is, along with its form of mini-competition (via reputation) that turns most ladies off.

When I go down the first few pages of top users by rep, there is nary a lady to be found.

Go over to Quantcast and look up Stack Overflow. Go down to the Demographics, and you'll see that a full 20% of the visits are by females. So they are here, lurking and using the wonderful info that Stack Overflow provides.

Then why aren't there more of them participating, both with questions and answers?

What can Stack Overflow do to persuade female programmers to participate more?

So after a dozen downvotes offset by a dozen upvotes, and accusations by many that I am a bigot, the bottom line seems to be that Stack Overflow appeals to males more than females.

This is my observation and I believe a proper analysis would support the hypotheses that a much higher percentage of male programmers use Stack Overflow than the percentage of female programmers.

Assuming that is the case, then Stack Overflow is geared more towards the male psyche than the female. If so, I again ask, what can they do about that?

This question was asked in StackOverflow Meta on November 20, 2009. It was made Community Wiki. It was asked in a constructive manner and should be considered an appropriate question for Meta.

Yet it was closed over two years after it was asked as "not constructive" after more than 40 upvotes and 10 favorites and 16 answers.

Now it resides here on Meta StackExchange, still closed. I just shake my head.
